Summary

Currently working as a MERN Stack Developer Intern at ConsultIT, building production-grade React applications and contributing to full-stack MERN projects across web and Android platforms. Over the past two years, delivered multiple deployed products spanning social platforms, business tools, e-learning systems, and media applications — developing strong command of REST API design, payment gateway integration, transactional email systems, cloud media handling, and modern frontend architecture. Seeking to grow into a full-stack engineering role where I can architect scalable systems and take on greater ownership across the product lifecycle.

Technical Skills

Languages	JavaScript (ES6+), TypeScript, Java, C++, C
Frontend	React.js, Vite, HTML5, CSS3, Tailwind CSS
Backend	Node.js, Express.js, REST APIs, JWT, Socket.IO
Database	MongoDB, Mongoose, MongoDB Atlas
Integrations	Razorpay, Twilio, Ultramsg, Brevo, Cloudinary, GitHub API
Tools	Git, GitHub, Postman, VS Code, Android Studio
Deployment	Vercel, Render, Capacitor (Android)

Experience

MERN Stack Developer Intern

Mar 2026 – Present

ConsultIT

Noida, Uttar Pradesh

- Built responsive client-facing dashboards using React.js and Tailwind CSS, eliminating cross-breakpoint layout inconsistencies and reducing redundant re-renders to improve page load speed.
- Integrated third-party REST APIs across 3+ modules, mapping response schemas, handling edge-case errors, and ensuring reliable data binding across all connected views.
- Designed a shared reusable component library after identifying repetitive UI patterns across projects, cutting feature development time and enforcing design consistency across the team.

Projects

LearnHub — E-Learning Platform | [GitHub](#) | [Live](#) (In Progress)

MERN + Razorpay + Brevo + Cloudinary

- Students and independent instructors lack an affordable platform to sell, deliver, and consume paid courses with secure video content and automated communication.
- Building a role-based platform (student, instructor, admin) with course creation, enrollment, and progress tracking; integrating Razorpay for course purchases with order verification and webhook-based payment confirmation.
- Using Cloudinary for scalable video/PDF lecture storage and adaptive streaming, and Brevo for transactional emails covering enrollment confirmation, OTP verification, and course update notifications.
- Currently developing core enrollment and payment flows; next milestones include quiz modules and instructor analytics.

DevHub — Developer Social Media Platform | [GitHub](#) | [Live](#)

MERN Stack

- Developers lacked a dedicated platform to share work and showcase repositories alongside a professional network.
- Designed and built a full social networking platform from scratch — feeds, follows, notifications, and GitHub API integration to display pinned repos on each profile.
- Implemented JWT authentication with role-based access and real-time interactions; deployed on Vercel + Render, delivering a live end-to-end developer community platform.

BizManager — Business Management Application | [GitHub](#) | [Demo](#)

MERN + Capacitor

- Small businesses lacked a simple tool to manage customers, track payments, and maintain transaction history across web and mobile.
- Built REST APIs with MongoDB Atlas, Mongoose validation, and secure auth workflows; packaged the app for Android using Capacitor.
- Delivered a cross-platform product with native-feel Android UI and a fully functional payment tracking system accessible on both web and mobile.

Education

Bachelor of Computer Applications (BCA)

2021 – 2024

Maa Shakumbhari University
