Summary

Currently working as a MERN Stack Developer Intern at ConsultIT, building production-grade React applications and contributing to full-stack MERN projects across web and Android platforms. Over the past two years, delivered **3+ deployed products** spanning social platforms, business tools, and media systems — developing strong command of REST API design, JWT authentication, MongoDB, and modern frontend architecture. Seeking to grow into a full-stack engineering role where I can architect scalable systems and take on greater ownership across the product lifecycle.

Technical Skills

Languages	JavaScript (ES6+), TypeScript, Java, C++, C
Frontend	React.js, Vite, HTML5, CSS3, Tailwind CSS
Backend	Node.js, Express.js, REST APIs, JWT, Socket.IO
Database	MongoDB, Mongoose, MongoDB Atlas
Tools	Git, GitHub, Postman, VS Code, Android Studio
Deployment	Vercel, Render, Capacitor (Android)

Experience

MERN Stack Developer Intern

Mar 2026 – Present

ConsultIT

Noida, Uttar Pradesh

- Built responsive interfaces for **4+ client-facing dashboards** using React.js + Tailwind CSS; eliminated cross-breakpoint layout inconsistencies and improved page load time by **~25%** through reducing redundant renders.
- Integrated third-party REST APIs across **3+ modules**; collaborated with backend engineers to map response schemas, handle edge-case errors, and deliver reliable data binding across all connected views.
- Identified **10+ repetitive UI patterns** across projects; built a shared reusable component library that cut feature development time by **~35%** and enforced design consistency across the team.

Projects

DevHub — Developer Social Media Platform | [GitHub](#) | [Live](#)

MERN Stack

- Developers lacked a dedicated platform to share work and showcase repositories alongside a professional network.
- Designed and built a full social networking platform from scratch — **5+ core features** including feeds, follows, notifications, and GitHub API integration to display pinned repos on each profile.
- Implemented JWT authentication with role-based access and real-time interactions across **2 deployed environments** (Vercel + Render), delivering a live end-to-end developer community platform.

BizManager — Business Management Application | [GitHub](#) | [Demo](#)

MERN + Capacitor

- Small businesses lacked a simple tool to manage customers, track payments, and maintain transaction history across web and mobile.
- Built **8+ REST API endpoints** with MongoDB Atlas, Mongoose validation, and secure auth workflows; packaged the app for Android using Capacitor.
- Delivered a **cross-platform product on 2 platforms** (web + Android) with native-feel UI and a fully functional payment tracking system supporting end-to-end transaction management.

Universal Media Downloader | [GitHub](#) | [Live](#)

MERN Stack

- No single tool existed to download media from **3+ platforms** (YouTube, Instagram, and others) in one place with history tracking.
- Integrated yt-dlp and gallery-dl in a Node.js backend; implemented MongoDB-backed session storage, download history, and user management supporting **multi-format media downloads**.
- Resolved cloud IP-blocking issues on Vercel/Render through backend routing strategies; shipped a live, SEO-optimized full-stack app with **100% uptime** across both deployment platforms.

Education

Bachelor of Computer Applications (BCA)

2021 – 2024

Maa Shakumbhari University
